IoT4CPS

Trustworthy IoT for CPS

IoT4CPS
Trustworthy IoT for CPS

The IoT4CPS project aims to develop guidelines, methods and tools for secure IoT-based applications in the areas of **Connected & Autonomous Vehicles and Industry 4.0**. IoT4CPS focuses on the development, production and operation of safe components and applications for connected and autonomous vehicles.

In this area, **IoT4CPS addresses the entire valuechain from semiconductors and control systems to applications**. Since the design and manufacture of the components required for connected vehicles requires a high degree of integration and information exchange, the methods and tools examined are also very relevant in the context of Industry 4.0.
