Dynamic Vision Sensoren (DVS) – Lösungen für die Personensicherheit

Outline

1. People counting and flow control for visitors of major events and public buildings

-> long-time field-proven prototypes

- Pose-determination for a proper usage of moving carpet (moving walkway)
 - -> results of research projects
 - -> preliminary assessment concerning safety integrity level requirements (SIL)

smart eye ► UCOS - People Counting Application (I)

- Flow control of visitors
- Avoiding overcrowding of areas and entrances
- Observing fire authority regulations

smart eye ► UCOS - People Counting Application (II)

Accurate results within seconds

Verified 98% counting accuracy (up to 75.000 counts per day)

Intelligence Warner Tachard

Smart eye ► UCOS – Technology Highlights

- Automatic background adaption / suppression
- Insensitive to poor and/or varying lighting conditions
- No problems with shadows
- Compact single-box solution, no additional hardware required
- Implicit privacy protection
- Remote device control via Ethernet
- Simple installation and setup
- ✓ Low power consumption
- ✓ Ethernet data interface

Exit observation of moving carpets / walkways (I)

Stereo Vision Sensor

(Stereo platforms – UCOS and platform with FPGA)

Outdoor (direct sun light, reflecting snow, shadows)

Exit observation of moving carpet (II)

Method

Exit observation of moving carpet (III)

Results of staged scenarios

Permitted usage	correct	wrong
Adult - standing	123	1
Child - standing	41	4
Summary	164	5

Forbidden usage	correct	wrong
Adult	141	5
 Bent over 	68	2
– lying	3	0
– other	70	3
Child	58	0
 Bent over 	8	0
– lying	9	0
– other	41	0
Objects	22	1
Summary	221	6

AIT Dynamic Vision Sensor Technology - Outlook

- Objective
 - Image processing for smart sensors with safety integrity level requirements (SIL)
 - Compact smart sensors with industry-standard interfaces
- Preliminary investigation of DVS basic technology features concerning SIL applications
 - Autonomous pixel output on coded bus implicit redundancy
 - Parallel evaluation of multiple ROIs multi-channel approach
 - High sensitivity to illumination (contrast) changes no exposure time
 - Suppression of background robust, simpler detection algorithms
 - High dynamic range due to particular pixel properties
